Department of Health Provides Update on COVID-19, 1,008 Positives Bring Statewide Total to 142,885, Record-high 30,855 One-day Test Results Reported

Harrisburg, PA - The Pennsylvania Department of Health today confirmed as of 12:00 a.m., September 11, that there are 1,008 additional positive cases of COVID-19, bringing the statewide total to 142,885. All 67 counties in Pennsylvania have cases of COVID-19.

Allegheny is reporting an increase of 100 cases and Centre is reporting an increase of 137 cases.

The number of tests administered within the last 7 days between September 4 and September 10 is 151,264 with 5,106 positive cases. There were 30,855 test results reported to the department through 10 p.m., September 10, the most test results reported in one day to date. These results represent the total number of tests administered.

There are 7,837 total deaths attributed to COVID-19, an increase of 17 new deaths reported. County-specific information and a statewide map are available on the [COVID-19 Data Dashboard](#).

“We know that congregation, especially over holidays and in college and university settings, yields increased case counts. The mitigation efforts in place now are essential to flattening the curve and saving lives,” Secretary of Health Dr. Rachel Levine said. “Wearing a mask, practicing social distancing, and following the requirements set forth in the orders for bars and restaurants, gatherings, and telework will help keep our case counts low. Together, as Pennsylvanians, all of our efforts are designed to support our communities to ensure that cases of COVID-19 remain low.”

Mask-wearing is required in all businesses and whenever leaving home. Consistent mask-wearing is critical to preventing the spread of COVID-19.

Beginning August 29, the department began publishing COVID-19 case counts using the updated standardized case definition for COVID-19 from the Council of State and Territorial Epidemiologists. This [revised case definition](#) updates criteria for case identification and case classification based on the continued evolution of the COVID-19 pandemic. It updates probable case classifications and adds suspect case classifications. The definition for confirmed cases using a positive PCR test has not changed. Viral antigen tests, which identify people who are

likely currently infected, will now be considered a probable case, even if the individual has no symptoms or exposure history. Persons with a positive antibody (serology) test, moving forward, will no longer be considered a probable case. However, cases previously counted as probable cases, using the prior national case definition, will remain counted as probable cases.

There are 110 cases who have a positive viral antigen test and are considered probable cases and 646 patients who have a positive serology test and either COVID-19 symptoms or a high-risk exposure.

There are 1,652,028 patients who have tested negative to date. Of the patients who have tested positive to date the age breakdown is as follows:

- Approximately 1% are ages 0-4;
- Nearly 2% are ages 5-12;
- Approximately 4% are ages 13-18;
- Nearly 12% are ages 19-24;
- Nearly 37% are ages 25-49;
- Approximately 22% are ages 50-64; and
- Nearly 23% are ages 65 or older.

Most of the patients hospitalized are ages 65 or older, and most of the deaths have occurred in patients 65 or older. More data is available [here](#).

The department is seeing significant increases in the number of COVID-19 cases among younger age groups, particularly 19 to 24-year-olds. [An alert was sent to healthcare providers](#) about the changing COVID-19 case demographics, as there are more cases in younger age groups than in those 50-64 and 65+. The following regions saw significant increases among 19 to 24-year-olds in each month from April to date in September:

- NC – Approximately 7 percent of cases in April to nearly 69 percent of cases so far in September;
- NE – 6 percent of cases in April to nearly 41 percent of cases so far in September;
- SE – Nearly 5 percent of cases in April to nearly 34 percent of cases so far in September;
- SW – Approximately 5 percent of cases in April to approximately 29 percent of cases so far in September;
- NW – Nearly 7 percent of cases in April to approximately 21 percent of cases so far in September; and
- SC – Approximately 7 percent of cases in April to nearly 18 percent of cases so far in September.

In nursing and personal care homes, there are 21,759 resident cases of COVID-19, and 4,727 cases among employees, for a total of 26,486 at 947 distinct facilities in 61 counties. Out of our total deaths, 5,290 have occurred in residents from nursing or personal care facilities. A county breakdown can be found [here](#).

Approximately 10,009 of our total cases are among health care workers.

For the latest information for individuals, families, businesses and schools, visit “Responding to COVID-19” on pa.gov.

Currently, all 67 counties are in the green phase of reopening.

Statewide – The Wolf Administration has since noon, Sept. 10:

- Released latest [CMU metrics report](#).
- Provided [Pennsylvania State Police enforcement data](#).
- [Called for legislative action to support small businesses](#) affected by COVID-19.
- [Dedicated \\$15 million to help students with remote learning](#), high-speed internet connection.

The Wolf Administration stresses the role Pennsylvanians play in helping to reduce the spread of COVID-19:

- Wash your hands with soap and water for at least 20 seconds or use hand sanitizer if soap and water are not available.
- Cover any coughs or sneezes with your elbow, not your hands.
- Clean surfaces frequently.
- Stay home to avoid spreading COVID-19, especially if you are unwell.
- If you must go out, you are required to wear a mask when in a business or where it is difficult to maintain proper social distancing.
